

LAUNCH YOUR EMS BUSINESS

State of the art fitness innovation crafted with cutting-edge technology to make effective and time-efficient workouts accessible to everyone.

MISSION & VISION

Our Mission

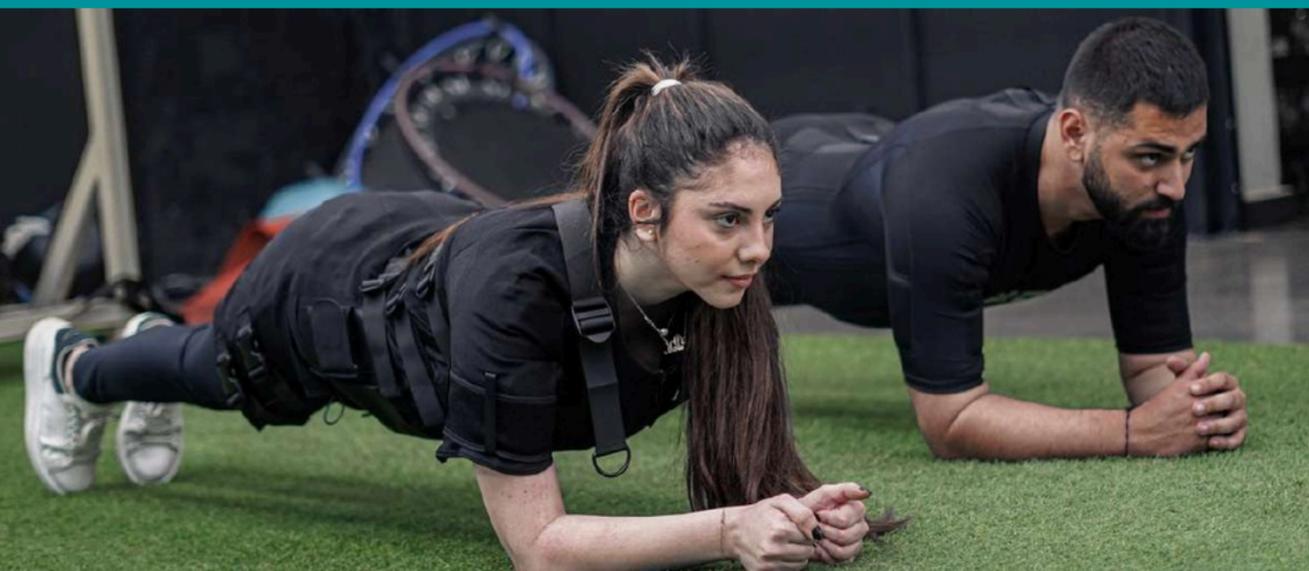

To empower individuals worldwide to achieve their fitness goals efficiently and effectively through innovative electro muscle stimulation technology, fostering a healthier and more active lifestyle for all.

Our Vision

To be the global leader in fitness technology, transforming the way people approach physical fitness and wellness by continuously advancing and refining our EMS solutions to meet the evolving needs of our customers.

Our Strategy

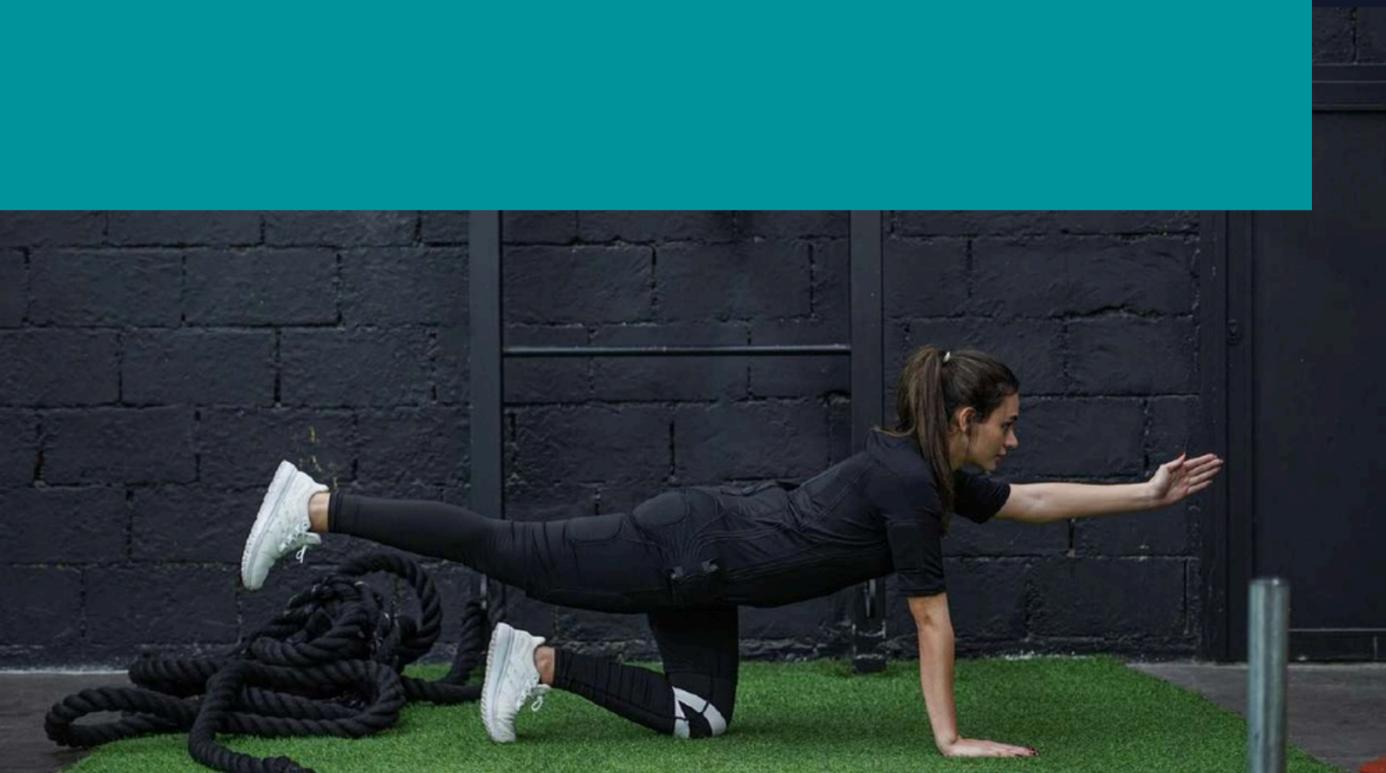

To focus on continuous innovation, global expansion, and a customer-centric approach to enhance the performance, accessibility, and awareness of our EMS suits. We aim to foster strong partnerships, maintain high-quality standards, and promote sustainability to revolutionize the fitness industry and empower individuals worldwide.

WHAT IS ELECTRICAL MUSCLE STIMULATION?

What is EMS?

- **EMS** stands for **Electrical Muscle Stimulation**. It's a technology that sends small electrical impulses to your muscles to make them contract.
- **How does it work?** Normally, your brain sends signals to your muscles when you move. EMS copies these signals but makes them stronger, so your muscles work harder than usual.
- **Full-body workout:** With EMS, you wear a special suit that has pads placed on major muscle groups (arms, legs, back, etc.). The suit sends electrical impulses to these areas, making them contract and work out all at once.
- **Efficient:** You can work out your whole body at the same time instead of targeting one muscle group at a time like in a regular gym session.
- **Low effort, high result:** Because the impulses make your muscles work harder, you get the same results as a regular workout, but in less time.
- **Safe:** EMS is safe and used by professional athletes, trainers, and physical therapists to improve strength and fitness.
- **Customizable:** The intensity of the impulses can be adjusted for each person, making it suitable for all fitness levels—from beginners to advanced athletes.
- **Scientifically proven:** EMS has been researched and used in sports and wellness for decades with proven effectiveness.
- **Not painful:** It might feel strange at first, like a tingling sensation, but it's not painful—just a different way of making your muscles work!

Why Should You Add EMS to Your Gym?

- **Time-efficient:** With EMS, clients can get a full-body workout in just 20 minutes, which equals 90 minutes of regular gym training.
- **Attract more clients:** EMS appeals to busy professionals, parents, and anyone looking for a quick, effective workout.
- **Increase revenue:** Offering EMS as an exclusive service can help your business stand out and charge premium prices.
- **Full-body workout:** EMS activates up to 93% of muscle fibers during the workout, leading to faster results.
- **Easy to set up:** Minimal space required and simple training for your staff.
- **Attract a different audience:** Meaning individuals you never thought would be clients of yours, or clients who join your gym for one or two months and then leave because they feel it's too hard for them.
- **Low impact:** EMS is gentle on the joints, making it ideal for people recovering from injury or looking for a safer workout.

THE SUIT

Unveiling E20's Revolutionary Suit:
Embrace the Future of Fitness with Our Cutting-Edge EMS Suits.

WET SUIT

Maximized Performance for Peak Results

Unleash your full potential with our Wireless Wet EMS Suit. Utilizing advanced hydro-tech fabric and optimal electrode placement, it delivers enhanced muscle stimulation and superior comfort.
